

Concrete Maintenance:

Ashburn Farm performed concrete repairs and replacements this year. We would like to point out that special care needs to be taken during the upcoming winter months. Any newly installed concrete is subject to scaling and spalling when chemicals are applied for deicing. Please do not use deicing salts such as calcium chloride, sodium chloride, ammonium sulfate or ammonium nitrate. Such chemicals can induce severe damage to the concrete and harm your pets' paws. Clean sand is recommended for traction, if possible. Thank you for your cooperation, please feel free to contact the maintenance team with any questions regarding this matter.
